ABOUT US

ABOUT US

NORDIC SEASON

Nordic season is found by two professional companies from Nordic states. By combining 20 years of knowledge of ships technology and experience in building houses, the best efficiency and quality of the product has been reached.

An eco-friendly approach comes as a token of appreciation to the nature that is welcoming to our products and valued by customers. Houseboats are produced out of sustainable materials. Thermowood is a non-toxic natural product that is stable, resistant to decay, and resin-free. Likewise, the water-based impregnants extend the longevity of the wood.

The knowledge, vision, and appreciation of nature are the key features in producing an Eco-friendly, high-quality sustainable houseboat.

INVEST
AND RENT

INVEST AND RENT

HAVING AN EXCLUSIVE HOUSEBOAT FOR
RECREATION OR COMMERCE IS SO EASY

More people are looking for an opportunity to spend time in nature. You cannot be closer to nature than living on the water. The houseboats are designed to fulfill the basic needs of a client. A fully equipped kitchen, bedroom, spacious bathroom, and sauna. Besides, it requires very little to no care and each solution is carefully premeditated so that the cleaning is easy after each trip.

The houseboats are produced keeping in mind that it will be used for six and more months a year. As a result, the materials are selected according to its organicity and durability. A houseboat like this is the first choice for allergic people.

Having a houseboat as an option for rent will increase the number of clients. Three different size houseboats and the opportunity to order it without sauna allows having a houseboat according to the needs of the region.

Give your business a boost and attract new customers that love to rent houseboats for a beautiful trip across the lake or river!

TECHNICAL MAINTENANCE

TECHNICAL MAINTENANCE

Daily care of a houseboat is easy, the same as cleaning home. All surfaces are covered with water-based impregnants and can be cleaned with water or soapy water. The incinerating toilet is a dry toilet that burns human feces instead of flushing away with water. Ashes are germ-free and can be sorted out as organic waste. Freshwater is pumped out of the lake or river and filtered three times, so it is safe to drink and prepare food.

NEW HYBRID ENGINE ON THE WAY!

Today's technologies allow producers to use a hybrid engine that is safe, cost-effective, and friendly to the environment. A hybrid engine is a win-win item in terms of energy efficiency since different motors work better at a different speed.

HOUSEBOAT MODEL

HOUSEBOAT 36M2

Families feel comfortable in a 36m2 houseboat. The kitchen, dining, and sitting areas are combined, so the family spends time together while cooking and relaxing. A three-section sliding window system provides better access to the deck because it is wider and easy for guests to interact both indoors and outdoors. The panels are built to glide easily within the frame. Two separate bedrooms with doubled beds and a foldable sofa for two more guests in a sitting area. Spacious bathroom with shower cabin, incinerating toilet, and washbasin. The sauna has a separate entrance from outside.

Measurements water print: 12 m x 5 m = 60 m2

Living area: 36 m2

People: 4+2

Kitchen – 2-burners induction stove; fridge with a freezer

Sleeping – two double beds 140x200; 2-seater foldable sofa.

Bathroom – shower cabin, incinerating toilet, and washbasin.

Heating – movable LPG heater

Engine – 40HP – 80HP
